about us

Zamen Tejarat Company

Zamen Tejarat Company, with more than ten years of experience in the laundry detergent production industry, is recognized as one of the pioneers in this field. Through continuous research and development, the company has managed to elevate the quality and quantity of its products to new levels. The implementation of smart changes in machinery and the enhancement of the skill level of the workforce have turned Zamen Tejarat Company into one of the industry leaders.

Through extensive efforts and significant investments, Zamen Tejarat Company succeeded in increasing its annual laundry detergent production capacity by nine times in the year 1374 (1995). This remarkable increase to 5,000 tons per year indicates the considerable growth and progress of the company. With a focus on improving production processes and resource efficiency, Zamen Tejarat Company is recognized as a successful model among leading industrial companies.

Dear customers can trust Zamen Tejarat Company's production quality and capacity with confidence and enjoy its high-quality and market-friendly products. The company's continuous, innovative efforts and ongoing advancements foresee a bright future for effective and long-term collaborations with its customers and partners.

About Us

In various sources, you will find mentions of different types of cleaning solutions. Some are designed for specific surfaces, such as metal or wood surfaces, while others have a comprehensive ability to clean all surfaces. New technologies have introduced innovative cleaning solutions to the market, based on nanotechnology. Indeed, nano cleaning solutions offer far better capabilities compared to traditional cleaning agents.

Types of Products

Detergents

The first category of cleaning agents is known as detergents. These are the most common cleaning compounds for fabrics and fibers. What you use as laundry detergent powder can dissolve dust, dirt, grease, etc., and completely remove them from the clothes.

Soaps

Soap is a cleaning agent consisting of a salt of fatty acids, made using an alkaline compound such as sodium hydroxide. The presence of plant-based fats and animal fats is essential for the production of various types of soap.

Bleaches

The third category of common cleaning agents is bleach solutions. In general, bleaches are divided into two categories: chlorine-based and oxygen-based bleaches. Chlorine bleaches are very strong and effectively whiten surfaces. Oxygen-based bleaches are used on all surfaces and also have a milder chemical nature for cleaning fabrics, ensuring no damage to the fabric's texture.

Stain Removers

One of the types of cleaning products we frequently encounter in daily life is stain remover solutions. Stain removers have the ability to remove all types of stains from surfaces. The synthesis of these cleaners uses raw detergent materials, alcohol compounds, minerals, and some enzymes.

Fabric Softeners

One of the most common types of cleaning products we encounter is fabric softeners. You may have experienced that after washing clothes, the fabric becomes rough and coarse. Fabric softeners can restore the softness and smoothness of the clothes.

Shampoos

Everyone is familiar with various types of shampoo cleaners. Shampoos are categorized into different types. The shampoos used for daily bathing to wash hair and body are the simplest, while some other types of shampoo are used for fabrics. Certainly, shampoos are strong cleaning agents with mild formulations.

Toothpaste

Toothpaste (gel, paste, or powder) is a pharmaceutical form containing abrasive materials designed to deliver anti-cavity medication to the teeth. Anti-cavity medication is defined as "a drug that helps in the prevention and prophylactic treatment of dental cavities (decay)."

Mission

The mission is to design, produce, and offer hygiene and cleaning products based on research and innovation through advanced technology at reasonable prices and with desirable quality to meet the needs of domestic and international markets. This is to ensure public health, protect the environment, uphold human dignity and the interests of employees, maintain honesty with stakeholders, along with social responsibility for sustainable development.

Vision

Zamen Tejarat Company, by achieving advanced knowledge and technology, employing specialized and committed staff, and protecting the environment, aims to become one of the top two companies in Iran's detergent industry within a ten-year period.
